

CaBIG-DSIC Liaison Reports 7/8/2004

Training (Ed Quick -OHSU): The entire Training WG has not met since the DSIC WG's last call. The Developer SIG is working on a white paper and outline of training materials needed by the caBIG community.

Integrative Cancer Research (ICR) (Terry Braun - University of Iowa – Holden): The entire IC Workspace has not met since the DSIC WG's last call. Juli Klemm, the workspace facilitator (BAH) is planning a face-to-face meeting to talk about projects in progress. The Gene Annotation SIG's last teleconference was July 1. The group received presentations on the SEED and GBrowse tools. The Pathway and Microarray SIGs also received tools presentations during teleconferences held July 6 and 7, respectively, but Terry did not attend those meetings.

Tissue Banks and Pathology Tools (TBPT) (Mark Watson - Washington University - Siteman): At its last meeting, the TBPT Workspace discussed plans for a face-to-face meeting in September. This group has not yet identified issues for the DSIC WG to address. Rather, most discussions have evolved around the group's CDE and Vocabulary needs.
